

# Incident Response Summary

**Incident Analyst:** Yessy Vasquez

**Date:** 03/11/2026

---

## Incident Overview

Briefly summarize what happened (2-3 sentences):

The user's data was not properly protected due to weak security measures. They did not have two-step authentication or a stronger security system in place, which made their information vulnerable. As a result, their data was exposed or at risk of unauthorized access.

## Incident Timeline

Briefly list the key events (times and actions):

Subject: Urgent: Password Expiration Notice

From: IT Support it-security@quickcart-helpdesk.com

To: Michael Tan michael.tan@quickcart.com

Date: April 3, 2025, 3:40 PM EST

---

2[04/07/2025 08:50 AM] Security Alert Triggered: Multiple failed login attempts detected (User: john.parker) | IP: 212.34.45.78

---

3[03:52 PM] Michael Tan:

I clicked on the link because I was in a rush. Entered my password too. Now I think it might have been fake. What should I do?

---

## How Did the Breach Occur?

Briefly explain the method of compromise:

The breach occurred due to inadequate security controls within the system.

Weak authentication measures and the absence of two-step verification made it easier for an unauthorized individual to gain access. Because the system lacked sufficient safeguards—such as strong password enforcement and layered security protections—the attacker was able to exploit these vulnerabilities and access exposed data.

---

## What Was Accessed or Compromised?

List clearly the specific data or assets compromised:

- 

\_\_\_\_\_  
Usernames and account IDs

- 

\_\_\_\_\_  
Stored files or sensitive documents

---

## Recommended Immediate Actions

List two immediate actions clearly:

1. Reset and Strengthen Account Credentials

---

2.

---

Secure and Investigate the System

---

# Proposed Policy Change

Clearly state one recommended policy improvement:

- Require all users to turn on two-step verification and create strong passwords. This will make accounts more secure and help prevent unauthorized access. \_\_\_\_\_
